

Thuraya GSM

About Thuraya DefenseComms

Manage critical missions effectively. Thuraya DefenseComms enables secure and reliable real-time 2-way communications for effective communication between HQ commands and deployed units, with solutions that enable connectivity and interoperability to a wide range of communication platforms, providing voice connectivity, network access, email / file transfer as well as supporting secure communications using standard government-approved IP encryption devices. Thuraya DefenseComms allows military commanders to plan operations pro-actively and react instantly when the need arises. Robust and powerful, Thuraya's network is designed to avoid congestion or call drop-out; giving military units the tools to never lose touch, even in the toughest terrains. Thuraya's COTM (Comms on the Move Solution) enables vital communications at high road speeds essential for C4ISR, blue-force tracking, logistic management, tactical command and control communication.

About Thuraya GSM

The innovative Thuraya GSM Solution provides added convenience for users needing to communicate outside of the GSM network range. It is used to extend GSM services to remote locations (mobile locations) with Thuraya IP as the backbone link. It gives end-users added mobility, more freedom and fewer restrictions on their communications.

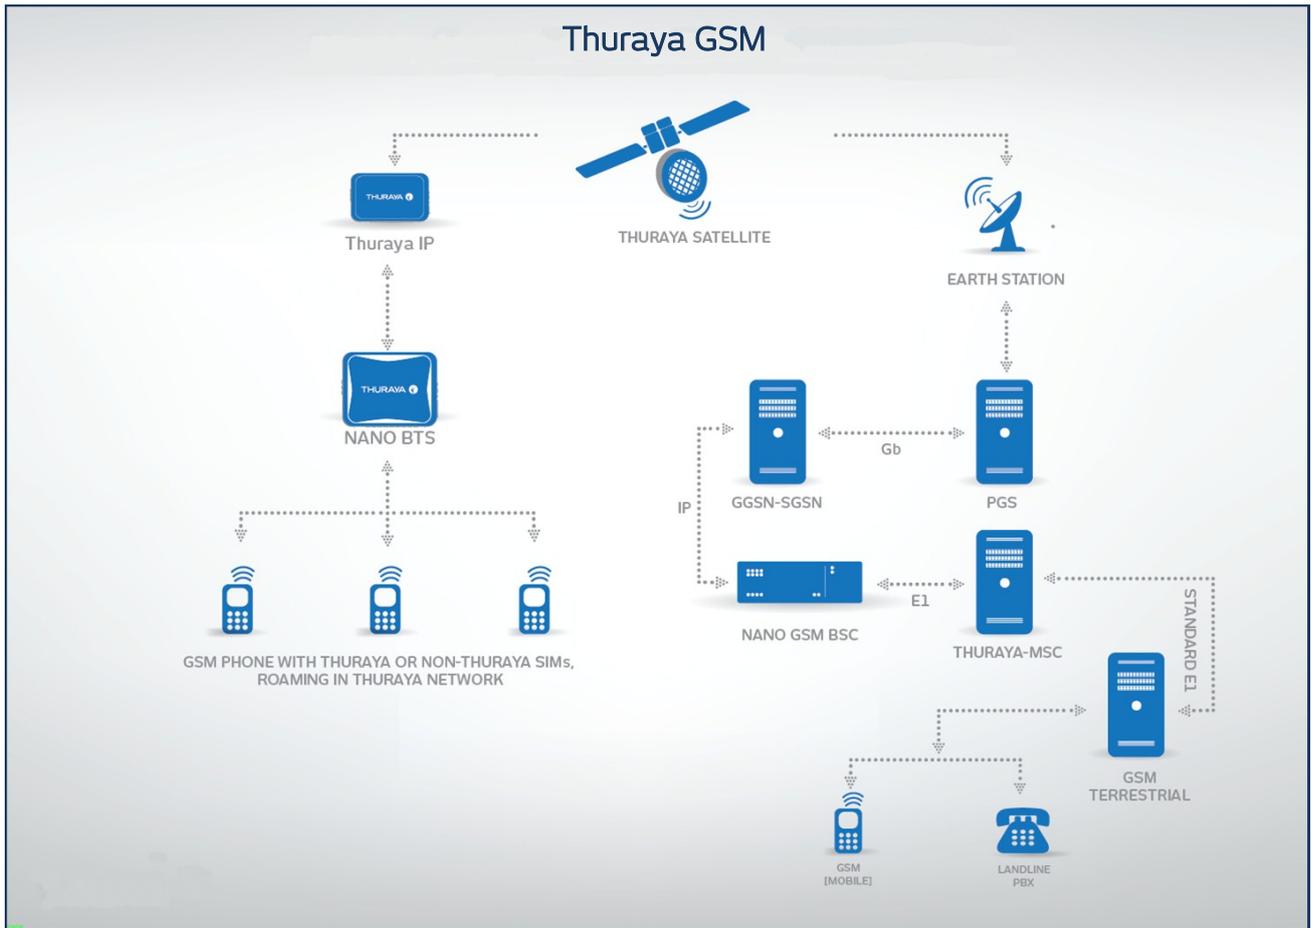

Who uses this solution?

Thuraya GSM is an excellent solution, which can accommodate the various communication needs of the Oil & Gas industry. It is an ideal companion for organizations with units on the move who need to rely on clear, steady connectivity and uninterrupted communications.

How does it work over Thuraya IP?

Thuraya GSM users can enjoy the convenience of using a GSM phone in remote locations since the calls are actually established over satellite in the packet mode. Its main function is to allow GSM roaming in remote and isolated locations where GSM services are generally not available. The IP access is used along with THIP terminals in both standard and streaming mode if needed. Users of this reliable solution can enjoy several benefits such as the ease of deployment of remote GSM networks and its simple, swift operation.
